

FEATURES**AC '97 2.3 COMPLIANT FEATURES**

- 6 DAC channels for 5.1 surround
- S/PDIF output
- Integrated headphone amplifiers
- Variable rate audio
- Double rate audio ($F_s = 96$ kHz)
- Greater than 90 dB dynamic range
- 20-bit resolution on all DACs
- 20-bit resolution on all ADCs
- Line-level mono phone input
- High quality CD input
- Selectable MIC input w/preamp
- AUX and line-in stereo inputs
- External amplifier power down (EAPD)
- Power management modes
- Jack sensing and device identification
- 48-pin LQFP package

ENHANCED FEATURES

- Integrated parametric equalizer
- Stereo microphone with up to 30 dB gain boost
- Integrated PLL for system clocking
- Variable sample rate: 7 kHz to 96 kHz
 - 7 kHz to 48 kHz in 1 Hz increments
 - 96 kHz for double rate audio
- Jack sense with auto topology switching
- Jack presence detection on up to 8 jacks
- Three software-controlled VREF_OUT signals
- Software-enabled outputs for jack sharing
- Auto-down mix and channel spreading
- Microphone-to-mono output
- Stereo microphone pass-through to mixer
- Built-in microphone/center/LFE/line-in sharing
- Built-in SURROUND/LINE_IN sharing
- Center/LFE line swapping
- Microphone swapping
- Reduced support component count
- General purpose digital output pin (GPO)
- Separate LINE_OUT and HP_OUT pins
- Headphone drivers on LINE_OUT and HP_OUT pins
- Independent headphone/LINE_OUT operation

REVISION HISTORY

10/04—Initial Version: Revision 0

NOTES

REDUCED SUPPORT COMPONENTS

The AD1986's many improvements reduce external support components for particular applications.

- **Multiple Microphone Sourcing:** The MIC_1/2, LINE_IN and C/LFE pins may all be selected as sources for microphone input (boost amplifier).
- **Multiple VREF_OUT Pins:** Each microphone-capable pin group (MIC_1/2, LINE_IN and C/LFE) has separate, software controllable VREF_OUT pins, reducing the need for external biasing components.
- **Internal Microphone Mixing:** Any combination of the MIC_1/2, LINE_IN and C/LFE pins may be summed to produce the microphone input. This removes the need for external mixing components in those applications that externally mixed microphone sources.
- **Advanced Jack Presence Detection:** Using two CODEC pins, eight resistors and isolated switch jacks, the AD1986 can detect jack insertion on eight separate jacks. Previous CODECs would have required 8 CODEC pins and 16 resistors.
- **Internal Microphone/Line In/C/LFE Sharing:** On systems that share the microphone with the C/LFE jack there are no external components required. The micro-phone selector can select the LINE_IN pins in those cases where the microphone and line input devices are swapped.
- **Internal Line In/Microphone/Surround Sharing:** On systems that share the line in with the surround jack there are no external components required.
- **Dual Headphone Amplifiers:** The AD1986 can drive headphones out of the HP_OUT or LINE_OUT pins.

AD1986

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

SPECIFICATIONS

Test conditions, unless otherwise noted.

Table 1.

| Parameter | Typ | Unit |
|------------------------------------|--------------|------|
| Temperature | 25 | °C |
| Digital Supply (DV _{DD}) | 3.3 ±10% | V |
| Analog Supply (AV _{DD}) | 5.0 ±10% | V |
| Sample Rate (F _s) | 48 | kHz |
| Input Signal | 1,008 | Hz |
| Analog Output Pass Band | 20 Hz–20 kHz | |
| V _{IH} | 2.0 | V |
| V _{IL} | 0.8 | V |
| V _{IH} | 2.4 | V |
| V _{IL} | 0.6 | V |

DAC Test Conditions

Calibrated
Output –3 dB Relative to Full Scale
10 kΩ Output Load: Line (Surround), Mono, Center, and LFE
32 Ω Output Load: Headphone

ADC Test Conditions

Calibrated
0 dB PGA Gain
Input –3.0 dB Relative to Full Scale

Table 2. Analog Input

| Input Voltage | Min | Typ | Max | Unit |
|---|-----|-------|-----|-------------------|
| MIC_1/2, LINE_IN, CD, AUX, PHONE_IN (No Preamp) | | 1 | | VRMS ¹ |
| C/LFE and SURROUND (When Used as Inputs) | | 2.83 | | V p-p |
| MIC_1/2, LINE_IN, C/LFE With 30 dB Preamp | | 0.032 | | VRMS |
| | | 0.089 | | V p-p |
| MIC_1/2, LINE_IN, C/LFE With 20 dB Preamp | | 0.1 | | VRMS |
| | | 0.283 | | V p-p |
| MIC_1/2, LINE_IN, C/LFE With 10 dB Preamp | | 0.316 | | VRMS |
| | | 0.894 | | V p-p |
| Input Impedance ² | | 20 | | kΩ |
| Input Capacitance | | 5 | 7.5 | pF |

¹ RMS values assume sine wave input.

² Guaranteed by design, not production tested.

Table 3. Master Volume

| Parameter | Min | Typ | Max | Unit |
|---|-----|------|-----|------|
| Step Size (LINE_OUT, HP Out, Mono Out, SURROUND, CENTER, LFE) | | –1.5 | | dB |
| Output Attenuation Range (0 dB to –46.5 dB) | | –6.5 | | dB |
| Mute Attenuation of 0 dB Fundamental | –80 | | | dB |

Table 4. Programmable Gain Amplifier—ADC

| Parameter | Min | Typ | Max | Unit |
|---------------------------------------|-----|------|-----|------|
| Step Size | | 1.5 | | dB |
| PGA Gain Range Span (0 dB to 22.5 dB) | | 22.5 | | dB |

AD1986

Table 5. Analog Mixer—Input Gain/Amplifiers/Attenuators

| Parameter | Min | Typ | Max | Unit |
|---|-----|-------|-----|------|
| Signal-to-Noise Ratio (SNR) CD to LINE_OUT | | 90 | | dB |
| LINE, AUX, PHONE to LINE_OUT ¹ | | 88 | | dB |
| MIC_1 or MIC_2 to LINE_OUT ¹ | | 80 | | dB |
| Step Size: All Mixer Inputs (Except PC Beep) | | –1.5 | | dB |
| Step Size: PC Beep | | –3.0 | | dB |
| Input Gain/Attenuation Range: All Mixer Inputs (+12 dB to –34.5 dB) | | –46.5 | | dB |

¹ Guaranteed by design, not production tested.

Table 6. Digital Decimation and Interpolation Filters¹

| Parameter | Min | Typ | Max | Unit |
|--------------------------------------|------------------|----------|------------------|---------|
| Pass Band | 0 | | $0.4 \times F_s$ | Hz |
| Pass Band Ripple | | | ± 0.09 | dB |
| Transition Band | $0.4 \times F_s$ | | $0.6 \times F_s$ | Hz |
| Stop Band | $0.6 \times F_s$ | | ∞ | Hz |
| Stop Band Rejection | –74 | | | dB |
| Group Delay | | $16/F_s$ | | S |
| Group Delay Variation Over Pass Band | | 0 | | μ s |

Table 7. Analog-to-Digital Converters

| Parameter | Min | Typ | Max | Unit |
|--|-----|----------|-----------|------|
| Resolution | | 20 | | Bits |
| Total Harmonic Distortion (THD) | | –95 | | dB |
| Dynamic Range (–60 dB Input, THD + N referenced to Full Scale, A-Weighted) | | –85 | | dB |
| Line Inputs (Input L, Ground R, Read R; Input R, Ground L, Read L) | | –80 | | dB |
| LINE_IN to Other Inputs | | –100 | –80 | dB |
| Gain Error (Full-Scale Span Relative to Nominal Input Voltage) | | ± 10 | | % |
| Interchannel Gain Mismatch (Difference of Gain Errors) | | | ± 0.5 | dB |
| ADC Offset Error | | | ± 5 | mV |

Table 8. Digital-to-Analog Converters

| Parameter | Min | Typ | Max | Unit |
|---|-----|-----|------|------|
| Resolution | | 24 | | Bits |
| Total Harmonic Distortion (LINE_OUT Drive) | | –92 | | dB |
| Total Harmonic Distortion HP_OUT | | –75 | | dB |
| Dynamic Range (–60 dB Input, THD + N referenced to Full Scale, A-Weighted) | | 91 | | dB |
| Gain Error (Full-Scale Span Relative to Nominal Input Voltage) | | ±10 | | % |
| Interchannel Gain Mismatch (Difference of Gain Errors) | | | ±0.7 | dB |
| DAC Crosstalk ¹ (Input L, Zero R, Read R_OUT; Input R, Zero L, Read L_OUT) | | | –80 | dB |

¹ Guaranteed by design, not production tested.

Table 9. Analog Output

| Parameter | Min | Typ | Max | Unit |
|---|-------|-------|-------|-------|
| FULL-SCALE OUTPUT VOLTAGE: SURROUND, CENTER/LFE, MONO_OUT | | 1 | | VRMS |
| Output Impedance ¹ | | 2.83 | | V p-p |
| External Load Impedance ¹ | 10 | 300 | | Ω |
| Output Capacitance ¹ | | 15 | | kΩ |
| External Load Capacitance | | | 1,000 | pF |
| FULL-SCALE OUTPUT VOLTAGE: HP_OUT, LINE_OUT | | 1 | | VRMS |
| Output Impedance ¹ | | 2.83 | | V p-p |
| External Load Impedance ¹ | 32 | | 1 | Ω |
| Output Capacitance ¹ | | 15 | | Ω |
| External Load Capacitance ¹ | | | 1,000 | pF |
| VREF_FILT, A _{VDD} = 5.0 V | 2.050 | 2.250 | 2.450 | V |
| A _{VDD} = 3.3 V | | 1.125 | | V |
| VREF_OUT(MIC, C/LFE, LIN) (xVREF [2:0] = 001) | | 2.250 | | V |
| (xVREF [2:0] = 100, A _{VDD} = 5.0 V) | | 3.700 | | V |
| (xVREF [2:0] = 100, A _{VDD} = 3.3 V) | | 2.250 | | V |
| (xVREF [2:0] = 010) | | 0.0 | | V |
| Current Drive | | | 5 | mA |
| Mute Click (Muted Output, Unmuted Midscale DAC Output) | | ±5 | | mV |

Table 10. Static Digital Specifications—AC '97

| Parameter | Min | Typ | Max | Unit |
|--|-------------------------|-----|-----|--------|
| High Level Input Voltage (V _{IH}), Digital Inputs | 0.65 × DV _{DD} | | | V |
| Low Level Input Voltage (V _{IL}) | | | | V |
| High Level Output Voltage (V _{OH}), I _{OH} = 2 mA | 0.90 × DV _{DD} | | | V |
| Low Level Output Voltage (V _{OL}), I _{OL} = 2 mA | | | | V |
| Input Leakage Current | –10 | | 10 | μA |
| Output Leakage Current | –10 | | 10 | μA |
| Input/Output Pin Capacitance | | | | 7.5 pF |

AD1986

Table 11. Power Supply (Quiescent State)

| Parameter | Min | Typ | Max | Unit |
|--|------|-----------|------|------|
| Power Supply Range—Analog (AV _{DD}) ±10% | 4.5 | | 5.5 | V |
| Power Supply Range—Digital (DV _{DD}) ±10% | 2.97 | | 3.63 | V |
| Power Dissipation—Analog (AV _{DD})/Digital (DV _{DD}) | | 365/171.6 | | mW |
| Analog Supply Current—Analog (AV _{DD}) | | 73 | | mA |
| Digital Supply Current—Digital (DV _{DD}) | | 52 | | mA |
| Power Supply Rejection (100 mV p-p Signal @ 1 kHz) | | 40 | | dB |

Table 12. Power-Down States—AC '97 (Quiescent State)

| Parameter | Set Bits | DV _{DD} Typ | AV _{DD} Typ | Unit |
|------------------------|-----------------------------------|----------------------|----------------------|------|
| ADC | PR0 | 53.0 | 45.7 | mA |
| FRONT DAC | PR1 | 53.7 | 47.7 | mA |
| CENTER DAC | PRI | 62.0 | 53.2 | mA |
| SURROUND DAC | PRJ | 53.5 | 47.1 | mA |
| LFE DAC | PRK | 62.0 | 52.8 | mA |
| ADC + ALL DACs | PR1, PR0, PRI, PRJ, PRK | 27.0 | 14.5 | mA |
| Mixer | PR2 | 36.6 | 53.2 | mA |
| ADC + Mixer | PR2, PR0 | 27.6 | 45.7 | mA |
| ALL DACs + Mixer | PR2, PR1, PRI, PRJ, PRK | 12.6 | 33.0 | mA |
| ADC + ALL DACs + Mixer | PR2, PR1, PR0, PRI, PRJ, PRK | 2.4 | 14.5 | mA |
| Standby | PR5, PR4, PR3, PR2, PR1(IJK), PR0 | 0.0 | 0.05 | mA |
| Headphone Standby | PR6 | 55.0 | 53.2 | mA |
| LINE_OUT HP Standby | LOHPEN = 0 | 62.0 | 53.2 | mA |

Table 13. Clock Specifications—AC '97¹

| Parameter | Min | Typ | Max | Unit |
|--|-----|--------------------|-----|------|
| Input Clock Frequency (Reference Clock Mode) | | 14.31818 48.000 | | MHz |
| Recommended Clock Duty Cycle | 40 | 50 | 60 | % |

¹ Refer to AC '97, Revision 2.3 specifications for details of clock detection at startup. AD1986 CODEC clock source detection must follow AC '97, Revision 2.3 guidelines.

AC '97 TIMING PARAMETERS

Guaranteed over operating temperature range. Refer to the AC '97 specifications (Revision 2.3, Release 1.0) for further information. The specification can be downloaded from <http://developer.intel.com/ial.scalableplatforms/audio>.

Figure 2. Cold Reset Timing (CODEC is Supplying the BIT_CLK Signal)

Table 14.

| Symbol | Parameter | Min | Typ | Max | Unit |
|----------------|--|-------|-----|---------|---------|
| t_{RST_LOW} | Recommended During Active (Low) RESET Signal | 1.0 | | | μS |
| $t_{RST2CLK}$ | RESET Inactive (High) to BIT_CLK Active | 162.8 | | 400,000 | nS |

Figure 3. Warm Reset Timing

Table 15.

| Symbol | Parameter | Min | Typ | Max | Unit |
|------------------|---------------------------------------|-------|-----|-----|---------|
| t_{SYNC_HIGH} | Sync Active (High) Pulse Width | | 1.3 | | μS |
| $t_{SYNC2CLK}$ | Sync Inactive to BITCLK Startup Delay | 162.8 | | | nS |

Figure 4. ATE Test Mode

Table 16.

| Symbol | Parameter | Min | Typ | Max | Unit |
|-----------------|---|-----|-----|-----|------|
| $t_{SETUP2RST}$ | Setup to RESET Inactive (SYNC, SDATA_OUT) | 15 | | | nS |
| t_{OFF} | Rising Edge of RESET to Hi-Z Delay | | | 25 | nS |

Figure 5. Bit Clock and Sync Timing

Table 17.

| Symbol | Parameter | Min | Typ | Max | Units |
|---------------------------|---------------------------------|------|--------|-----------|---------------|
| $t_{\text{SYNC_HIGH}}$ | BITCLK High Pulse Width | 40.5 | | 41.7 | nS |
| $t_{\text{CLK_LOW}}$ | BITCLK Low Pulse Width | 39.7 | | 40.6 | nS |
| $t_{\text{CLK_PERIOD}}$ | BITCLK Period | | 81.4 | | nS |
| | BIT_CLK Frequency | | 12.288 | | MHz |
| | BIT_CLK Frequency Accuracy | | | ± 1.0 | ppm |
| | BIT_CLK Jitter ^{1,2} | | 750 | | ps |
| $t_{\text{SYNC_HIGH}}$ | Sync Active (High) Pulse Width | 1.3 | | | μS |
| $t_{\text{SYNC_LOW}}$ | Sync Inactive (Low) Pulse Width | 19.5 | | | μS |
| $t_{\text{SYNC_PERIOD}}$ | Sync Period | 20.8 | | | μS |
| | Sync Frequency | | 48.0 | | kHz |

¹ Guaranteed by design, but not production tested.
² Output jitter directly dependent on input clock jitter.

| VOL | Digital Signal Low Level Output Voltage | | | 0.1 DV _{DD} | V |

ABSOLUTE MAXIMUM RATINGS

Table 21.

| Power Supply | Min | Max | Unit |
|-------------------------------------|------|------------------------|------|
| Digital (DV _{DD}) | -0.3 | +3.6 | V |
| Analog (AV _{DD}) | -0.3 | +6.0 | V |
| Input Current (Except Supply Pins) | | ±10.0 | mA |
| Analog Input Voltage (Signal Pins) | -0.3 | AV _{DD} + 0.3 | V |
| Digital Input Voltage (Signal Pins) | -0.3 | DV _{DD} + 0.3 | V |
| Ambient Temperature (Operating) | | | °C |
| Commercial | 0 | +70 | |
| Industrial | -40 | +85 | |
| Storage Temperature | -65 | +150 | °C |

Stresses greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

ENVIRONMENTAL CONDITIONS

Ambient Temperature Rating

$$T_{AMB} = T_{CASE} - (PD \times \theta_{CA})$$

T_{CASE} = case temperature in °C

PD = power dissipation in W

θ_{CA} = thermal resistance (case-to-ambient)

θ_{JA} = thermal resistance (junction-to-ambient)

θ_{JC} = thermal resistance (junction-to-case)

Table 22. Thermal Resistance

| Package | θ_{JA} | θ_{JC} | θ_{CA} |
|---------|---------------|---------------|---------------|
| LQFP | 76.2°C/W | 17°C/W | 59.2°C/W |

PIN CONFIGURATION AND FUNCTION DESCRIPTION

Figure 9. Pin Configuration

Table 23. Pin Function Descriptions

| Mnemonic | Pin Number | Input/Ouput | Description |
|-----------|------------|-------------|--|
| AC '97CK | 2 | I | External Clock In (14.31818 MHz). |
| SDATA_OUT | 5 | I | AC Link Serial Data Output. Input Stream. |
| BIT_CLK | 6 | O | AC Link Bit Clock. 12.288 MHz Serial Data Clock. |
| SDATA_IN | 8 | I/O | AC Link Serial Data Input. Output Stream. |
| SYNC | 10 | I | AC Link Frame Sync . |
| RESET | 11 | I | AC Link Reset. Master Hardware Reset. |

Table 24. Digital Input/Output

| Mnemonic | Pin Number | Input/Output | Description |
|------------|------------|--------------|--|
| S/PDIF_OUT | 48 | O | S/PDIF Output. |
| EAPD | 47 | O | External Amplifier Power-Down Output. |
| GPO | 3 | O | General-Purpose Output pin. A digital signal that can be used to control external circuitry. |

Table 25. Jack Sense

| Mnemonic | Pin Number | Input/Ouput | Description |
|--------------|------------|-------------|----------------------|
| JACK_SENSE_A | 16 | I | JackSense 0–3 Input |
| JACK_SENSE_B | 17 | I | Jack Sense 4–7 Input |

Table 26. Analog Input/Output

| Mnemonic | Pin Number | Input/Output | Description |
|-------------|------------|--------------|---|
| PCBEEP | 12 | I | Analog PC Beep Input. Routed to all output capable pins when RESET is asserted. |
| PHONE_IN | 13 | I | Monaural Line Level Input. |
| AUX_L | 14 | I | Auxiliary Left Channel Input. |
| AUX_R | 15 | I | Auxiliary Right Channel Input. |
| CD_L | 18 | I | CD-Audio-Left Channel. |
| CD_GND | 19 | I | CD-Audio-Analog-Ground-Reference (for Differential CD Input). |
| CD_R | 20 | I | CD-Audio-Right Channel. |
| MIC_1 | 21 | I | Microphone 1 or Line-In-Left Input (See LISEL Bits in Register 0x76). |
| MIC_2 | 22 | I | Microphone 2 or Line-In-Right Input (See LISEL Bits in Register 0x76). |
| LINE_IN_L | 23 | I | Line-In-Left Channel or Microphone 1 Input (See OMS Bits in Register 0x74). |
| LINE_IN_R | 24 | I | Line-In-Right Channel or Microphone 2 Input (See OMS Bits in Register 0x74). |
| CENTER_OUT | 31 | I/O | Center-Channel Output or Microphone 1 Input (See OMS Bits in Register 0x74). |
| LFE_OUT | 32 | I/O | Low-Frequency-Enhanced Output or Microphone 2 Input (See OMS Bits in Register 0x74). |
| HEADPHONE_L | 39 | O | Headphone-Out-Left Channel (See HPSEL Bits in Register 0x76). |
| HEADPHONE_R | 41 | O | Headphone-Out-Right Channel (See HPSEL Bits in Register 0x76). |
| LINE_OUT_L | 43 | O | Line-Out (Front)—Left Channel (See LOSEL Bit in Register 0x76) (HP Drive-Capable). |
| LINE_OUT_R | 45 | O | Line-Out (Front)—Right Channel (See LOSEL Bit in Register 0x76) (HP Drive-Capable). |
| MONO_OUT | 37 | O | Monaural Output to Telephony Subsystem Speakerphone. |
| SURR_OUT_L | 35 | I/O | Surround-Left Channel Output or Line-In-Left Input (See LISEL and SOSEL Bits in Register 0x76). |
| SURR_OUT_R | 36 | I/O | Surround-Right Channel Output or Line-In-Right Input (See LISEL and SOSEL Bits in Register 0x76). |

Table 27. Filter/Reference

| Mnemonic | Pin Number | Input/Output | Description |
|--------------------|------------|--------------|--|
| VREF_FILT | 27 | O | Voltage Reference Filter. |
| VREF_OUT (MIC) | 28 | O | Programmable Voltage Reference Output (Intended for MIC Bias on the MIC_1/2 Channels). |
| VREF_OUT (LINE_IN) | 29 | O | Programmable Voltage Reference Output (Intended for MIC Bias on the LINE_IN Channels). |
| VREF_OUT (C/LFE) | 33 | O | Programmable Voltage Reference Output (Intended for MIC Bias on the C/LFE Channels). |

Table 28. Power and Ground

| Mnemonic | Pin Number | Input/Output | Description |
|------------------|------------|--------------|--|
| DV _{DD} | 1 | | Digital Supply Voltage (3.3 V). |

¹ CODEC is always master, ID bits are read-only 0 (zeros).

² Bits for the AD198x are backwards-compatible only, AC97NC and MSPLT are read-only 1 (ones).

³ SODIS/SOSEL were LODIS/LOSEL in the AD1985. Most AD1985 configurations swapped LINE_OUT and SURROUND pins; these bits really operated as SO not LO.

REGISTER DETAILS

RESET (REGISTER 0x00)

Writing any value to this register performs a register reset, which causes all registers to revert to their default values. The serial configuration (0x74) register will not reset the SLOT16, REGM [2:0], SPOVR, SPAL, SPDZ, and SPLNK. These bits are reset on a hard, hardware, or power-on reset. The REGM and serial configuration bits are only reset only by an external hardware reset.

The AC '97, Revision 2.3, Page 1 registers CODEC class/rev (0x601), PCI SVID (0x621), PCI SID (0x641), function information (0x681—per supported function), and sense register ST [3:0] bits (0x6A1 D [15:13]—per supported function) are only reset on a power-on reset. To satisfy the AC '97, Revision 2.3 requirements, these registers/bits are sticky across all software and hardware resets.

Reading this register returns the ID code of the part and a code for the type of 3D stereo enhancement.

| x | Reserved. Default: 0 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

MASTER VOLUME (REGISTER 0x02)

This register controls the LINE_OUT, SURROUND, and CENTER/LFE outputs' mute and volume controls in unison. Each volume sub-register contains five bits, generating 32 volume steps of -1.5 dB each for a range of 0 dB to -46.5dB.

The headphone output (HP_OUT) mute and volume are controlled separately by the headphones volume register (0x04). The monaural output (MONO_OUT) mute and volume is controlled separately by the mono volume register (0x06). To control the LINE_OUT, SURROUND, and CENTER/LFE volumes separately use the front DAC volume register (0x18) for LINE_OUT; the surround DAC Volume register (0x38) for SURROUND; and the C/LFE DAC volume register (0x36) for CENTER/LFE.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| | 1 | x xxxx | Muted | |
| M (Mute) | Mutes the output. | | | Default: muted (0x1) |
| x | Reserved. | | | Default: 0 |

PC BEEP (REGISTER 0x0A)

This controls the level of the Analog PC beep or the level and frequency of the Digital PC beep. The volume register contains four bits, generating 16 volume steps of –3.0 dB each for a range of 0 dB to –45.0 dB. The tone frequency can be set between 47 Hz to 12,000 Hz or disabled.

Per Intel’s BIOS writer’s guide, the PC beep signal should play via headphone out, line out, and mono out paths. BIOS algorithms should unmute the PC beep register and the path to each output, and set the volume levels for playback.

When the AD1986 is in reset (the external RESET pin is low), the PCBEEP_IN pin is connected internally to all of the device output pins (HEADPHONE L/R, LINE_OUT L/R, MONO_OUT, SURROUND L/R, and CENTER/LFE). There are no amplifiers or attenuators on this path and the external circuitry connected to this pin should anticipate the drive requirements for the multiple output sources. Headphones connected to output pins will substantially load the signal.

| A/DS (PC Beep Source) | <p>Selects either the digital PC beep generator (= 0) or analog PCBEEP pin (= 1). When the CODEC is in reset mode the analog PCBEEP pin is routed to the outputs via a high impedance path. Once out of reset, this bit must be programmed to a 1 to pass through any signals on the analog PCBEEP pin. Designers may choose not to connect the analog PCBEEP pin and use the digital PC beep generator solely.</p> <p>Default: digitally-selected (0x0)</p> | | | | | | | | | | | | | | | | |
| M (PC Beep Mute) | <p>When this bit is set to 1, the PC beep signal (analog or digital) is muted.</p> <p>Default: muted (0x1)</p> | | | | | | | | | | | | | | | | |
| x | <p>Reserved.</p> <p>Default: 0</p> | | | | | | | | | | | | | | | | |

PHONE VOLUME (REGISTER 0x0C)

This register controls the PHONE_IN mute and gain to the analog mixer section. The volume register contains five bits, generating 32 volume steps of 1.5 dB each for a range of 12.0 dB to –34.5 dB. This does not control the record ADC gain (see Register 0x1C).

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|--------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|---------|
| 0x0C | Phone Volume | M | x | x | x | x | x | x | x | x | x | x | V4 | V3 | V2 | V1 | V0 | 0x8008 |

Table 35.

| Register | Function | | | Default |
|---------------------|---|--------|----------------------|----------------------|
| V [4:0] (Volume) | Controls the gain of this input to the analog mixer from 12.0 dB to –34.5 dB. The least significant bit represents –1.5 dB. | | | |
| | MV | [4:0] | Function | Default |
| | 0 | 0 0000 | 12 dB gain | |
| | 0 | 0 1000 | 0 dB | Default |
| | 0 | 1 1111 | –34.5 dB attenuation | |
| | 1 | x xxxx | Muted | |
| M (Mute) | Mutes the input to the analog mixer. | | | Default: muted (0x1) |
| x | Reserved. | | | Default: 0 |

MICROPHONE VOLUME (REGISTER 0x0E)

This register controls the MIC_1 (left) and MIC_2 (right) channels' gain, boost, and mute to the analog mixer section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB. This does not control the record ADC gain (see Register 0x1C).

In typical stereo microphone applications, the signal paths must be identical and should be set to the same gain, boost, and mute values. With stereo controls, this input is capable of nonmicrophone sources by disabling the microphone boost (M20 Bit = 0).

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|-------------------|-----|-----|-----|-----|-----|-----|-----|-----|----|-----|----|-----|-----|-----|-----|-----|---------|
| 0x0E | Microphone Volume | LM | x | x | LV4 | LV3 | LV2 | LV1 | LV0 | RM | M20 | x | RV4 | RV3 | RV2 | RV1 | RV0 | 0x8888 |

Table 36.

| Register | Function | | | Default |
|-----------------------------------|---|------------|----------------------|----------------------|
| L/RV [4:0] (Left/Right Volume) | Controls the left/right channel gains of this input to the analog mixer from +12 dB to –34.5 dB. The least significant bit represents –1.5 dB. | | | |
| | L/RM | L/RV [4:0] | Function | Default |
| | 0 | 0 0000 | 12 dB gain | |
| | 0 | 0 1000 | 0 dB | Default |
| | 0 | 1 1111 | –34.5 dB attenuation | |
| | 1 | x xxxx | Mute | |
| M20 (MIC_1/2 Gain Boost) | Enables additional gain to increase the microphone sensitivity. This controls the boost of both the MIC_1 and MIC_2 channels. The nominal gain boost by default is 20 dB; however, MBG0 [1:0] bits (Register 0x76), allow changing the gain boost to 10 dB or 30 dB if necessary. | | | |
| | M20 | MGB0 [1:0] | Boost Gain | Default |
| | 0 | xx | 0 dB gain | Default: disabled |
| | 1 | 00 | 20 dB gain | Default |
| | 1 | 01 | 10 dB gain | |
| | 1 | x xxxx | Mute | |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | | Default: muted (0x1) |
| x | Reserved. | | | Default: 0 |

LINE IN VOLUME (REGISTER 0x10)

This register controls the LINE_IN gain and mute to the analog mixer section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB. This does not control the record ADC gain (see Register 0x1C).

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| 0x10 | Line In Volume | LM | x | x | LV4 | LV3 | LV2 | LV1 | LV0 | RM | x | x | RV4 | RV3 | RV2 | RV1 | RV0 | 0x8888 |

Table 37.

| Register | Function | | | |
|-----------------------------------|---|------------|----------------------|----------------------|
| L/RV [4:0] (Left/Right Volume) | Controls the left/right channel gains of this input to the analog mixer from 12 dB to –34.5 dB. The least significant bit represents –1.5 dB. | | | |
| | L/RM | L/RV [4:0] | Function | Default |
| | 0 | 0 0000 | 12 dB gain | |
| | 0 | 0 1000 | 0 dB | Default |
| | 0 | 1 1111 | –34.5 dB attenuation | |
| 1 | x xxxx | Muted | | |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | | Default: muted (0x1) |
| x | Reserved. | | | Default: 0 |

CD VOLUME (REGISTER 0x12)

This register controls the CD gain and mute to the analog mixer section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB. This does not control the record ADC gain (see Register 0x1C).

Many operating systems will play CDs directly using the digital data from the CD tracks. This control will only affect CD audio playback if it is enabled for analog and this input is connected to the CD player analog connection.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| | L/RM | L/RV [4:0] | Function | Default |
| | 0 | 0 0000 | 12 dB gain | |
| | 0 | 0 1000 | 0 dB | Default |
| | 0 | 1 1111 | –34.5 dB attenuation | |
| 1 | x xxxx | Muted | | |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | | Default: muted (0x1) |
| x | Reserved. | | | Default: 0 |

AUX VOLUME (REGISTER 0x16)

This register controls the AUX_IN gain and mute to the analog mixer section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB. This does not control the record ADC gain (see Register 0x1C).

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| 0x16 | AUX Volume | LM | x | x | LV4 | LV3 | LV2 | LV1 | LV0 | RM | x | x | RV4 | RV3 | RV2 | RV1 | RV0 | 0x8888 |

Table 39.

| Register | Function | | Default |
|-----------------------------------|--|------------|----------------------|
| L/RV [4:0] (Left/Right Volume) | Controls the left/right channel gains of this input to the analog mixer from +12 dB to –34.5 dB. The least significant bit represents –1.5 dB. | | |
| | L/RM | L/RV [4:0] | Function |
| | 0 | 0 0000 | 12 dB gain |
| | 0 | 0 1000 | 0 dB |
| | 0 | 1 1111 | –34.5 dB attenuation |
| 1 | x xxxx | Mute | Default |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | Default: muted (0x1) |
| x | Reserved. | | Default: 0 |

FRONT DAC VOLUME (REGISTER 0x18)

This register controls the front DAC gain and mute to the analog mixer section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|------------------|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|-----|-----|-----|-----|-----|---------|
| 0x18 | Front DAC Volume | LM | x | x | LV4 | LV3 | LV2 | LV1 | LV0 | RM | x | x | RV4 | RV3 | RV2 | RV1 | RV0 | 0x8888 |

Table 40.

| Register | Function | | Default |
|-----------------------------------|--|------------|----------------------|
| L/RV [4:0] (Left/Right Volume) | Controls the left/right channel gains of this input to the analog mixer from +12 dB to –34.5 dB. The least significant bit represents –1.5 dB. | | |
| | L/RM | L/RV [4:0] | Function |
| | 0 | 0 0000 | +12 dB gain |
| | 0 | 0 1000 | 0 dB |
| | 0 | 1 1111 | –34.5 dB attenuation |
| 1 | x xxxx | Mute | Default |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | Default: muted (0x1) |
| x | Reserved. | | Default: 0 |

ADC SELECT (REGISTER 0x1A)

This register selects the record source for the ADC, independently for the right and left channels. The default value is 0x0000, which corresponds to the MIC_1/2 input for both channels.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| 111 | 0 | 0 | 1 | MIC_1 + LINE_IN left + CENTER (mixed) | MIC_2 + LINE_IN right + LFE (mixed) |
| 111 | 0 | 1 | 0 | MIC_2 + LINE_IN right + LFE (mixed) | MIC_1 + LINE_IN left + CENTER (mixed) |
| 111 | 0 | 1 | 1 | MIC_2 + LINE_IN right + LFE (mixed) | MIC_1 + LINE_IN left + CENTER (mixed) |
| 111 | 1 | x | x | MIC_1 + MIC_2 + LINE_IN left + LINE_IN right + CENTER + LFE (mixed) | |

¹ To select the alternate pins as a microphone source, see the OMS [2:0] bit (Register 0x74).

² To mix the left/right MIC channels see MMIX bit (Register 0x7A).

³ For dual MIC recording see 2CMIC bit (Register 0x76) to enable simultaneous recording into L/R channels.

⁴ To swap left/right MIC channels, see the MS bit (Register 0x20) for MIC_1/2 selection.

⁵ The MONO_OUT pin may be connected to the left channel of the microphone selector and is affected by these bits.

ADC VOLUME (REGISTER 0x1C)

This register controls the mute and gain of the ADC record path. The volume register contains four bits, generating 16 volume steps of 1.5 dB each for a range of 0 dB to 22.5 dB.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|------------|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|-----|-----|-----|-----|---------|
| 0x1C | ADC Volume | LM | x | x | x | LV3 | LV2 | LV1 | LV0 | RM | x | x | x | RV3 | RV2 | RV1 | RV0 | 0x8080 |

Table 43.

| 0 | 1111 | 22.5 dB gain | | | | | | | | | | | | | | | | | | | |
| 1 | xxxx | Muted | | | | | | | | | | | | | | | | | | | |
| L/RM (Left/Right Mute) | Mutes the left/right channels independently. | | | | | | | | | | | | | | | | | | | | |
| x | Reserved. | | | | | | | | | | | | | | | | | | | | |

GENERAL-PURPOSE (REGISTER 0x20)

This register should be read before writing to generate a mask for only the bit(s) that need to be changed.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|-----------------|-----|-----|-----|-----|-------|-------|-----|----|------|----|----|----|----|----|----|----|---------|
| 0x20 | General-Purpose | x | x | x | x | DRSS1 | DRSS0 | MIX | MS | LPBK | x | x | x | x | x | x | x | 0x0000 |

Table 44.

| Register | Function | | Default | |
|--------------------------------------|---|---|---|---------|
| LPBK (Loop-Back Control) | This bit enables the digital internal loop back from the ADC to the front DAC. This feature is normally used for testing and troubleshooting. See LBKS bit in Register 0x74 for changing the loop back path to use the SURROUND or CENTER/LFE DACs. | | Default: disabled (0x0) | |
| MS (MIC Select) | Used in conjunction with the OMS [2:0] (0x74 D10:08)), 2CMIC (0x76 D06) and MMIX (0x7A D02). Selects which MIC input goes into the ADC0 record selector's MIC channel inputs. When set, this bit swaps the left and right channels. Selects mono output audio source. | | | |
| MIX (Mono Output Select) | MIX | Mono Output Connection | Default | |
| | 0 | MIX—Connected to the mono mixer output. | | |
| DRSS [1:0] (Double Rate Slot Select) | The DRSS bits specify the slots for the n+1 sample outputs. PCM L (n+1) and PCM R (n+1) data are by default provided in output Slots 10 and 11. | | | |
| | DRSS [1:0] | DRSS [1:0] | Function | |
| | | 00 | PCM L, R (n+1) data is on Slots 10 and 11 | Default |
| | | 01 | PCM L, R (n+1) data is on Slots 7 and 8 | |
| x | Reserved. | | Default: 0 | |
| | | 1x | Reserved | |

AUDIO INT AND PAGING (REGISTER 0x24)

This register controls the audio interrupt and register paging mechanisms.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|----------------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|-----|-----|-----|-----|---------|
| 0x24 | Audio Int and Paging | I4 | I3 | I2 | I1 | I0 | x | x | x | x | x | x | x | PG3 | PG2 | PG1 | PG0 | 0xxx00 |

Table 45.

| Register | Function | | Default |
|---------------------------------------|--|---|----------------|
| PG [3:0] (Page Selector (Read/Write)) | This register is used to select a descriptor of 16 word pages between Registers 0x60 to 0x6F. A value of 0x0 is used to select vendor specific space to maintain compatibility with AC '97 Revision 2.2 vendor specific registers. System software can determine implemented pages by writing the page number and reading the value back. If the value read back does not match the value written, the page is not implemented. All implemented pages must be in consecutive order (i.e. Page 0x2 cannot be implemented without Page 0x1). | | |
| | PG [3:0] | Addressing Page Selection | Default |
| | 000 (Page 0) | Page 0 (vendor) registers | Default |
| | 001 (Page 1) Page 0xh-0xF | Page ID 01, registers defined in AC '97, Revision 2.3 Reserved | |
| I0 (Interrupt Enable (Read/Write)) | Software should not unmask the interrupt unless ensured by the AC '97 controller that no conflict is possible with modem Slot 12—GPI functionality. AC '97 Revision 2.2 compliant controllers will not likely support audio CODEC interrupt infrastructure. In that case, software can poll the interrupt status after initiating a sense cycle and waiting for sense cycle max delay (defined by software) to determine if an interrupting event has occurred. | | |
| | I0 | Interrupt Mask Status | |
| | 0 | Interrupt generation is masked | Default |
| | 1 | Interrupt generation is unmasked | |

| Register | Function | | |
|--|--|---|------------------------------------|
| I1 (Sense Cycle (Read/Write)) | Writing a 1 to this bit causes a sense cycle start if supported. If a sense cycle is in progress, writing a 0 to this bit will abort the sense cycle. The data in the sense result register (0x6A, Page 01) may or may not be valid, as determined by the IV bit. | | |
| | I1 | Read | Write |
| | 0 | Sense cycle completed (or not initiated) Default | Aborts sense cycle (if in process) |
| | 1 | Sense cycle still in process | Initiate sense cycle |
| These bits will indicate the cause(s) of an interrupt. This information should be used to service the correct interrupting event(s). If the Interrupt Status (Bit I4) is set, one or both of these bits must be set to indicate the interrupt cause. Hardware will reset these bits back to zero when the interrupt status bit is cleared. | | | |
| I [3:2] (Interrupt Cause (RO)) | I2 | Interrupt Status | |
| | 0 | Sense status has not changed (did not cause interrupt). Default | |
| | 1 | Sense cycle completed or new sense information is available | |
| | I3 | | |
| 0 | GPIO status change did not cause interrupt | | |
| 1 | GPIO status change caused interrupt | | |
| I4 (Interrupt Status (Read/Write)) | Interrupt event is cleared by writing a 1 to this bit. The interrupt bit will change regardless of condition of interrupt enable (I0) status. An interrupt in the GPI in Slot 12 in the AC link will follow this bit change when interrupt enable (I0) is unmasked. If this bit is set, one or both of I3 or I2 must be set to indicate the interrupt cause. | | |
| | I4 | Read | Write |
| | 0 | Interrupt clear Default | No operation |
| | 1 | Interrupt generated | Clears interrupt |
| x | Reserved. | | Default: 0 |

POWER-DOWN CTRL/STAT (REGISTER 0x26)

The ready bits are read only; writing to REF, ANL, DAC, and ADC has no effect. These bits indicate the status for the AD1986 subsections. If the bit is 1 then that subsection is ready. 'Ready' is defined as the subsection able to perform in its nominal state.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|----------------------|------|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|-----|-----|-----|-----|---------|
| 0x26 | Power-Down Ctrl/Stat | EAPD | PR6 | PR5 | PR4 | PR3 | PR2 | PR1 | PR0 | x | x | x | x | REF | ANL | DAC | ADC | 0x000x |

Table 46.

| Register | ADC | ADC Status |
|---|------------|---|
| ADC (RO) (ADC Section Status (RO)) | 0 | ADC not ready |
| | 1 | ADC sections ready to transmit data |
| ADC (RO) (Front DAC Status (RO)) | DAC | Front DAC Status |
| | 0 | ADC not ready |
| | 1 | ADC sections ready to transmit data |
| ANL (RO) (Analog Amplifiers, Attenuators and Mixers Status (RO)) | ANL | Analog Status |
| | 0 | Analog amplifiers, attenuators and mixers not ready |
| | 1 | Analog amplifiers, attenuators and mixers ready |

| Register | ADC | ADC Status |
|---|---|--|
| REF (RO) (Voltage References, V_{REF} and VREF_OUT status (read only)) | VREF_OUT pin output states controlled by the CV_{REF} , MV_{REF} , and LV_{REF} controls in Register 0x70. | |
| | REF | VREF Status |
| | 0 | Voltage References, VREF and VREF_OUT not ready. |
| | 1 | Voltage References, VREF, and VREF_OUT up to nominal level. |
| PR0 | All ADCs and input selectors' power down: clearing this bit enables VREF regardless of the state of PR3. Default: all ADCs and input muxs powered on (0x0). | |
| PR1 | All DACs power down. Also powers down the EQ circuitry. Clearing this bit enables VREF regardless of the state of PR3. Default: all DACs and EQ powered on (0x0). | |
| PR2 | Analog mixer power down. (valid if PR7 = 0). Default: analog mixer powered on (0x0). | |
| PR3 | All V_{REF} and V_{REF_OUT} pins power down. May be used in combination with PR2 or by itself. If all the ADCs and DACs are not powered down, setting this bit will have no effect on the V_{REF} and will only power down VREF_OUT. Default: All VREF and VREF_OUT pins powered on (0x0). | |
| PR4 | AC-Link Interface power down. The reference and the mixer can be either up or down, but all power-up sequences must be allowed to run to completion before PR5 and PR4 are both set. In multiple-CODEC systems, the master CODEC's PR4 bit controls the slave CODEC. In the slave CODEC the PR4 bit has no effect except to enable or disable PR5. Default: AC-link Interface powered on (0x0). | |
| PR5 | Internal Clocks disabled. PR5 has no effect unless all ADCs, DACs, and the AC-Link are powered down (e.g. PR0, PR1, PR4). The reference and the mixer can be either up or down, but all power-up sequences must be allowed to run to completion before PR5 and PR4 are both set. In multiple CODEC systems, the master CODEC's PR5 controls the slave CODEC. PR5 is effective in the slave CODEC if the master's PR5 bit is clear. Default: internal clocks enabled (0x0). | |
| PR6 | Powers down the headphone amplifiers. Default: HP amp powered on (0x0). | |
| EAPD | EAPD | EAPD Pin Status |
| | 0 | Sets the EAPD pin low, enabling an external power amplifier. Default |
| | 1 | Sets the EAPD pin high, shutting the external power amplifier off. |
| x | Reserved. Default: 0 | |

EXT'D AUDIO ID (REGISTER 0x28)

The extended audio ID register identifies which extended audio features are supported. A nonzero extended audio ID value indicates one or more of the extended audio features are supported.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|----------------|-----|-----|-----|-----|------|------|------|------|------|------|------|------|----|------|-----|-----|---------|
| 0x28 | Ext'd Audio ID | ID1 | ID0 | x | X | REV1 | REV0 | AMAP | LDAC | SDAC | CDAC | DSA1 | DSA0 | x | SPDF | DRA | VRA | 0x0BC7 |

Table 47.

| Register | Description | Setting | Function | | | | | |
|------------|------------------------------------|-----------|--|--------------|-------|-----------|-------|---------|
| VRA (RO) | Variable rate PCM audio: read only | = 1 | Variable rate PCM audio supported | | | | | |
| SPDIF (RO) | SPDIF support: read only | = 1 | SPDIF transmitter supported (IEC958) | | | | | |
| DRA (RO) | Double rate audio: read only | = 1 | Double rate audio supported for DAC0 L/R | | | | | |
| DSA [1:0] | DAC slot assignment (read/write) | | | | | | | |
| | DSA [1:0] | Front DAC | | Surround DAC | | C/LFE DAC | | Default |
| | | Left | Right | Left | Right | Left | Right | |
| | 00 | 3 | 4 | 7 | 8 | 6 | 9 | Default |
| | 01 | 7 | 8 | 6 | 9 | 10 | 11 | |
| 10 | 6 | 9 | 10 | 11 | 3 | 4 | | |
| 11 | 10 | 11 | 3 | 4 | 7 | 8 | | |

| Register | Description | Setting | Function |
|----------------|--------------------------------|---------|---|
| CDAC (RO) | PCM CENTER DAC: read only | = 1 | PCM center DAC supported |
| SDAC (RO) | PCM Surround DAC: read only | = 1 | CM Surround DACs supported |
| LDAC (RO) | PCM LFE DAC: read only | = 1 | PCM LFE DAC supported |
| AMAP (RO) | Slot DAC mappings: read only | = 1 | CODEC ID based slot/DAC mappings |
| REV [1:0] (RO) | AC97 version: read only | = 10 | CODEC is AC '97, Revision 2.3 compliant |
| ID [1:0] (RO) | CODEC configuration: read only | = 00 | Primary AC '97 |
| x | Reserved | | Default: 0 |

EXT'D AUDIO STAT/CTRL (REGISTER 0x2A)

The extended audio status and control register is a read/write register that provides status and control of the extended audio features.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|-----------------------|-----|-----|-----|-----|-----|------|----|------|------|------|-------|-------|----|-------|-----|-----|---------|
| 0x2A | Ext'd Audio Stat/Ctrl | x | x | PRK | PRJ | PRI | SPCV | x | LDAC | SDAC | CDAC | SPSA1 | SPSA0 | x | SPDIF | DRA | VRA | 0x0xx0 |

Table 48.

| Register | Function | |
|--|---|--|
| VRA (Variable Rate Audio) | Enables variable rate audio mode. Enables sample rate registers and SLOTREQ signaling. | |
| | VRA | VRA State |
| | 0 | Disabled, sample rate 48 kHz for all ADCs and DACs |
| 1 | Enabled, ADCs and DACs can be set to variable sample rates | |
| DRA (Double Rate Audio) | DRA = 1. Enables double-rate audio mode in which data from PCM L and PCM R in Output Slots 3 and 4 is used in conjunction with PCM L (n + 1) and PCM R (n + 1) data to provide DAC streams at twice the sample rate designated by the PCM front sample rate control register. When using the double rate audio, only the front DACs are supported and all other DACs (surround, center, and LFE) are automatically powered down. The slot that contains the additional data is determined by the DRSS[1:0] bits (0x20 D [11:10]). Note that DRA can be used without VRA; in which case the converter rates are forced to 96 kHz if DRA = 1. | |
| | DRA | DRA State |
| | 0 | Disabled, DACs sample at the programmed rate |
| 1 | Enabled, DACs sample at twice (2x) the programmed rate | |
| SPDIF | SPDIF transmitter subsystem enable/disable bit (read/write) | |
| | This bit is also used to validate that the SPDIF transmitter output is actually enabled. The SPDIF bit is only allowed to be set high, if the SPDIF pin (48) is pulled down at power-up enabling the CODEC transmitter logic. If the SPDIF pin is floating or pulled high at power-up, the transmitter logic is disabled and therefore this bit returns a low, indicating that the SPDIF transmitter is not available. This bit must always be read back, to verify that the SPDIF transmitter is actually enabled. | |
| | SPDIF | Function |
| 0 | Disables the S/PDIF transmitter | |
| 1 | Enables the S/PDIF transmitter | |
| AC '97 Revision 2.2 AMAP compliant default SPDIF slot assignments. | | |
| SPSA [1:0] (SPDIF Slot Assignment Bits: (Read/Write)) | SPSA [1:0] | S/PDIF Slot Assignment |
| | 00 | 3 and 4 |
| | 01 | 7 and 8 |
| | 10 | 6 and 9 |
| 11 | 10 and 11 | |
| CDAC (RO) (CENTER DAC Status (RO)) | CDAC | CENTER DAC Status |
| | 0 | CENTER DAC not ready |
| | 1 | CENTER DAC section ready to receive data |
| | 0 | Surround DAC not ready |
| 1 | Surround DAC section ready to receive data | |

| Register | Function | |
|---|---|---|
| LDAC (RO) (LFE DAC Status (RO)) | LDAC | LFE DAC Status |
| | 0 | LFE DAC not ready |
| | 1 | LFE DAC section ready to receive data |
| SPCV (RO) (SPDIF Configuration Valid (RO)) | Indicates the status of the SPDIF transmitter subsystem, enabling the driver to determine if the currently programmed SPDIF configuration is supported. SPCV is always valid, independent of the SPDIF enable bit status. | |
| | SPCV | S/SPDIF Configuration Status |
| | 0 | Invalid SPDIF configuration {SPSA, SPSR, DAC slot rate, DRS} |
| | 1 | Valid SPDIF configuration |
| PRI (Center DAC Power-Down) | Actual status reflected in the CDAC (0x3A D06) bit. | |
| | PRI | CENTER DAC Power Status |
| | 0 | Power-on CENTER DAC Default |
| | 1 | Power-down CENTER DAC |
| PRJ (Surround DACs Power- Down) | Actual status reflected in the SDAC bit. | |
| | PRJ | Surround DACs Power Control |
| | 0 | Power-on surround DACs Default |
| | 1 | Power-down surround DACs |
| PRK (LFE DAC Power-Down) | Actual status reflected in the LDAC bit. | |
| | PRK | LFE DACs Power Control |
| | 0 | Power-on LFE DAC Default |
| | 1 | Power-down LFE DAC |
| x | Reserved. Default: 0 | |

FRONT DAC PCM RATE (REGISTER 0x2C)

This read/write sample rate control register contains 16-bit unsigned value, representing the rate of operation in Hz. If the VRA bit (0x2A D00) is 0 this register is forced to 48 kHz (0xBB80). If VRA is 1, this register may be programmed with the actual sample rate.

To use 96 kHz in AC '97 mode set the double rate audio (DRA) bit (0x2A D01). When using DRA in AC '97, only the front DACs are supported and all other DACs (surround, center, and LFE) are automatically powered down.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|--------------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|---------|
| 0x2C | Front DAC PCM Rate | R15 | R14 | R13 | R12 | R11 | R10 | R9 | R8 | R7 | R6 | R5 | R4 | R3 | R2 | R1 | R0 | 0xBB80 |

Table 49.

| Register | Function |
|---------------------------|---|
| R [15:0] (Sample Rate) | The sampling frequency range is from 7 kHz (0x01B58) to 48 kHz (0xBB80) in 1 Hz increments. If 0 is written to VRA, then the sample rates are reset to 48k. |

SURROUND DAC PCM RATE (REGISTER 0x2E)

This read/write sample rate control register contains a 16-bit unsigned value, representing the rate of operation in Hz. If the VRA bit (0x2A D00) is 0, this register is forced to 48 kHz (0xBB80). If VRA is 1, this register may be programmed with the actual sample rate.

If the DRA bit (0x2A D01) is set, the surround DAC is inoperative and automatically powered down.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|---------------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|---------|
| 0x2E | SURR_1 DAC PCM Rate | R15 | R14 | R13 | R12 | R11 | R10 | R9 | R8 | R7 | R6 | R5 | R4 | R3 | R2 | R1 | R0 | 0xBB80 |

Table 50.

| Register | Function |
|---------------------------|---|
| R [15:0] (Sample Rate) | The sampling frequency range is from 7 kHz (0x01B58) to 48 kHz (0xBB80) in 1 Hz increments. If zero is written to VRA then the sample rates are reset to 48k. |

C/LFE DAC PCM RATE (REGISTER 0x30)

This read/write sample rate control register contains a 16-bit unsigned value, representing the rate of operation in Hz. If the VRA bit (0x2A D00) is 0 this register is forced to 48 kHz (0xBB80). If VRA is 1, this register may be programmed with the actual sample rate.

If the DRA bit (0x2A D01) is set, the C/LFE DAC is inoperative and automatically powered down.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|--------------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|---------|
| 0x30 | C/LFE DAC PCM Rate | R15 | R14 | R13 | R12 | R11 | R10 | R9 | R8 | R7 | R6 | R5 | R4 | R3 | R2 | R1 | R0 | 0xBB80 |

Table 51.

| Register | Function |
|---------------------------|--|
| R [15:0] (Sample Rate) | The sampling frequency range is from 7 kHz (0x01B58) to 48 kHz (0xBB80) in 1 Hz increments. If 0 is written to VRA then the sample rates are reset to 48k. |

ADC PCM RATE (REGISTER 0x32)

This read/write sample rate control register contains 16-bit unsigned value, representing the rate of operation in Hz. If the VRA bit (0x2A D00) is 0 (zero) this register is forced to 48 kHz (0xBB80). If VRA is 1, this register may be programmed with the actual sample rate.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|----------------|-----|-----|-----|-----|-----|-----|----|----|----|----|----|----|----|----|----|----|---------|
| 0x32 | ADC 0 PCM Rate | R15 | R14 | R13 | R12 | R11 | R10 | R9 | R8 | R7 | R6 | R5 | R4 | R3 | R2 | R1 | R0 | 0xBB80 |

Table 52.

| Register | Function |
|---------------------------|--|
| R [15:0] (Sample Rate) | The sampling frequency range is from 7 kHz (0x01B58) to 48 kHz (0xBB80) in 1 Hz increments. If 0 is written to VRA then the sample rates are reset to 48k. |

C/LFE DAC VOLUME (REGISTER 0x36)

This register controls the CENTER/LFE DAC gain and mute to the output selector section. The volume register contains five bits, generating 32 volume steps of –1.5 dB each for a range of +12.0 dB to –34.5 dB.

Note that the left/right association of the CENTER and LFE channels can be swapped at the CODEC outputs by setting the CSWP bit in Register 74h. These controls remain unchanged regardless of the state of CSWP.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| L/RM (Left/Right Mute) | Mutes the left/right channels independently. Default: muted (0x1) | | | | | | | | | | | | | | | | | | | | |
| x | Reserved. Default: 0 | | | | | | | | | | | | | | | | | | | | |

SPDIF CONTROL (REGISTER 0x3A)

Register 0x3A is a read/write register that controls SPDIF functionality and manages bit fields propagated as channel status (or subframe in the V-case). With the exception of V, this register should only be written to when the SPDIF transmitter is disabled (SPDIF bit in Register 0x2A is 0). This ensures that control and status information start up correctly at the beginning of SPDIF transmission.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

EQ CONTROL REGISTER (REGISTER 0x60)

Register 0x60 is a read/write register that controls equalizer function and data setup. The register also contains the Biquad and coefficient address pointer, which is used in conjunction with the EQ data register (0x78) to setup the equalizer coefficients. The reset default disables the equalizer function until the coefficients can be properly set up by the software and sets the symmetry bit to allow equal coefficients for left and right channels.

| | Biquad 3 | Coef a2 | BCA [5,0] = 101000 | Biquad 6 | Coef b2 | BCA [5,0] = 111010 |

Table 57.

| Register | Function | |
|-------------------------|--|--|
| CHS (Channel Select) | Swaps the blocks that are used for symmetry coefficients. Only valid when the SYM bit is set. | |
| | CHS | Function |
| | 0 | Selects left channel coefficients data block |
| | 1 | Selects right channel coefficients data block |
| SYM (Symmetry) | When set to 1 this bit indicates that the left and right channel coefficients are equal. | |
| | This shortens the coefficients setup sequence since only the left channel coefficients need to be addressed and setup. The right channel coefficients are simultaneously copied into memory. | |
| | SYM | Function |
| | 0 | Left and right channels can use different coefficients |
| | 1 | Indicates that the left and right channel coefficients are equal |
| EQM (Equalizer Mute) | When set to 1, this bit disables the equalizer function (allows all data pass-through). The reset default sets this bit to 1 disabling the equalizer function until the biquad coefficients can be properly set. | |
| | EQM | Function |
| | 0 | EQ is enabled. |
| | 1 | EQ is disabled. Data will pass-thru without change. |
| x | Reserved. | |

EQ DATA REGISTER (REGISTER 0x62)

This read/write register is used to transfer EQ biquad coefficients into memory. The register data is transferred to, or retrieved from the address pointed by the BCA bits in the EQ CNTRL register (0x60). Data will only be written to memory, if the EQM bit (Register 0x60 bit 15) is asserted.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

Table 59.

| Register | Function |
|---|---|
| CVREF [2:0] (C/LFE VREF_OUT Control) | Sets the voltage/state of the C/LFE VREF_OUT signal. VREF_OUT is used to power microphone style devices plugged into the connected jack circuitry. The VREF_OUT pin must be connected to both the left and right channels through external resistors to function properly. Selections other than those defined are invalid and should not be programmed. |
| C/LFE VREF_OUT Setting | |
| CVREF [2:0] | 5.0 AV_{DD} 3.3 V AV_{DD} Default |
| 000 | Hi-Z Hi-Z Default |
| 001 | 2.25 V 2.25 V |
| 010 | 0V 0V |
| 100 | 3.70 V 2.25 V |
| JSMAP (Jack Sense Mapping) | The AD1986 supports two different methods of mapping the JACK_SENSE_A/B resistor tree to bits JS [7:0]. Use these bits to change from the default mapping to the alternate method. |
| JSMAP | Function |
| 0 | Default Jack Sense mapping Default |
| 1 | Alternate Jack Sense mapping |
| MMDIS (Mono Mute Disable) | Disables the automatic muting of the MONO_OUT pin by jack sense events (see advanced jack sense bits JS [3:0] (0x76 D [05:04], 0x72 D [05:04])). |
| MMDIS | Function |
| 0 | Automute can occur Default |
| 1 | Automute disabled |
| MVREF [2:0] (MIC VREF_OUT) | Sets the voltage/state of the microphone VREF_OUT signal. VREF_OUT is used to power microphone style devices plugged into the connected jack circuitry. The VREF_OUT pin must be connected to both the left and right channels through external resistors to function properly. Selections other than those defined are invalid and should not be programmed. |
| MIC_1/2 VREF_OUT Setting | |
| MV_{REF} [2:0] | 5.0 AV_{DD} 3.3 V AV_{DD} Default |
| 000 | Hi-Z Hi-Z Default |

| 010 | 0 V 0 V |
| 100 | 3.70 V 2.25 V |
| x | Reserved. Default: 0 |

JACK SENSE (REGISTER 0x72)

All register bits are read/write except for JS0ST and JS1ST, which are read only. **Important:** Please refer to Table 72 to understand how JACK_SENSE_A and JACK_SENSE_B codec pins translate to JS1 and JS0.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|------------|----------|---------|---------|--------|--------|--------|---------|---------|----|----|--------|--------|--------|--------|---------|---------|---------|
| 0x72 | Jack Sense | JS1 SPRD | JS1 DMX | JS0 DMX | JSMT 2 | JSMT 1 | JSMT 0 | JS1 EQB | JS0 EQB | x | x | JS1 MD | JS0 MD | JS1 ST | JS0 ST | JS1 INT | JS0 INT | 0x0000 |

Table 60.

| Register | Function | | | | | | | | | |
|------------------------------------|--|-------------------|----------|---------|----------------|---|-----------------|---|--|-------------------|
| JS0INT (JS0 Interrupt Status) | Indicates JS0 has generated an interrupt. Remains set until the software services JS0 interrupt; i.e., JS0 ISR should clear this bit by writing a 0 to it. 1. Interrupts are generated by valid state changes of JS pins. 2. Interrupt to the system is actually an OR combination of this bit and JS3 JS0 INT. 3. The interrupt implementation path is selected by the INTS bit (Register 0x74). 4. It is also possible to generate a software system interrupt by writing a 1 to this bit. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS0INT</th> <th>Read</th> <th>Write</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS0 did not generate interrupt</td> <td>No operation</td> </tr> <tr> <td>1</td> <td>JS0 generated interrupt</td> <td>Clears JS0INT bit</td> </tr> </tbody> </table> | JS0INT | Read | Write | 0 | JS0 did not generate interrupt | No operation | 1 | JS0 generated interrupt | Clears JS0INT bit |
| JS0INT | Read | Write | | | | | | | | |
| 0 | JS0 did not generate interrupt | No operation | | | | | | | | |
| 1 | JS0 generated interrupt | Clears JS0INT bit | | | | | | | | |
| JS1INT (JS1 Interrupt Status) | Indicates JS1 has generated an interrupt. Remains set until the software services JS1 interrupt; i.e., JS1 ISR should clear this bit by writing a 0 to it. See JS0INT description above for additional details. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS1INT</th> <th>Read</th> <th>Write</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS1 did not generate interrupt</td> <td>No operation</td> </tr> <tr> <td>1</td> <td>JS1 generated interrupt</td> <td>Clears JS1INT</td> </tr> </tbody> </table> | JS1INT | Read | Write | 0 | JS1 did not generate interrupt | No operation | 1 | JS1 generated interrupt | Clears JS1INT |
| JS1INT | Read | Write | | | | | | | | |
| 0 | JS1 did not generate interrupt | No operation | | | | | | | | |
| 1 | JS1 generated interrupt | Clears JS1INT | | | | | | | | |
| JS0ST (RO) (JS0 State (RO)) | This bit always reports the logic state of JS0. On MIC jack sensing: depending on the applications circuit, the logic state for jack sense pins can be the opposite of that on other jacks. Software needs to be aware of this is interpreting the JS event as a plug in our out event. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS0ST</th> <th>Function</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS0 is low (0)</td> <td></td> </tr> <tr> <td>1</td> <td>JS0 is high (1)</td> <td></td> </tr> </tbody> </table> | JS0ST | Function | Default | 0 | JS0 is low (0) | | 1 | JS0 is high (1) | |
| JS0ST | Function | Default | | | | | | | | |
| 0 | JS0 is low (0) | | | | | | | | | |
| 1 | JS0 is high (1) | | | | | | | | | |
| JS1ST (RO) (JS1 State (read only)) | This bit always reports the logic state of JS1. MIC jack sensing: depending on the applications circuit, the logic state for JS pins can be the opposite to the other jacks. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS1ST</th> <th>Function</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS1 is low (0)</td> </tr> <tr> <td>1</td> <td>JS1 is high (1)</td> </tr> </tbody> </table> | JS1ST | Function | 0 | JS1 is low (0) | 1 | JS1 is high (1) | | | |
| JS1ST | Function | | | | | | | | | |
| 0 | JS1 is low (0) | | | | | | | | | |
| 1 | JS1 is high (1) | | | | | | | | | |
| JS0MD (JS0 MODE) | This bit selects the operation mode for JS0. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS0MD</th> <th>Function</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Jack sense mode—JS0INT must be polled by software</td> <td>Default</td> </tr> <tr> <td>1</td> <td>Interrupt mode—CODEC will generate an interrupt on JS0 event</td> <td></td> </tr> </tbody> </table> | JS0MD | Function | Default | 0 | Jack sense mode—JS0INT must be polled by software | Default | 1 | Interrupt mode—CODEC will generate an interrupt on JS0 event | |
| JS0MD | Function | Default | | | | | | | | |
| 0 | Jack sense mode—JS0INT must be polled by software | Default | | | | | | | | |
| 1 | Interrupt mode—CODEC will generate an interrupt on JS0 event | | | | | | | | | |
| JS1MD (JS1 MODE) | This bit selects the operation mode for JS1. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS1MD</th> <th>Function</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Jack sense mode—JS1INT must be polled by software</td> <td>Default</td> </tr> <tr> <td>1</td> <td>Interrupt mode—CODEC will generate an interrupt on JS1 event</td> <td></td> </tr> </tbody> </table> | JS1MD | Function | Default | 0 | Jack sense mode—JS1INT must be polled by software | Default | 1 | Interrupt mode—CODEC will generate an interrupt on JS1 event | |
| JS1MD | Function | Default | | | | | | | | |
| 0 | Jack sense mode—JS1INT must be polled by software | Default | | | | | | | | |
| 1 | Interrupt mode—CODEC will generate an interrupt on JS1 event | | | | | | | | | |
| JS0EQB (JS0 EQ Bypass Enable) | This bit enables JS0 to control the EQ bypass. When this bit is set to 1, JS0 = 1 will cause the EQ to be bypassed. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS0EQB</th> <th>Function</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS0 does not affect EQ</td> <td>Default</td> </tr> <tr> <td>1</td> <td>JS0 = 1 will cause the EQ to be bypassed</td> <td></td> </tr> </tbody> </table> | JS0EQB | Function | Default | 0 | JS0 does not affect EQ | Default | 1 | JS0 = 1 will cause the EQ to be bypassed | |
| JS0EQB | Function | Default | | | | | | | | |
| 0 | JS0 does not affect EQ | Default | | | | | | | | |
| 1 | JS0 = 1 will cause the EQ to be bypassed | | | | | | | | | |
| JS1EQB (JS1 EQ Bypass Enable) | This bit enables JS1 to control the EQ bypass. When this bit is set to 1, JS1 = 1 will cause the EQ to be bypassed. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>JS1EQB</th> <th>Function</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>JS1 does not affect EQ</td> <td>Default</td> </tr> <tr> <td>1</td> <td>JS1 = 1 will cause the EQ to be bypassed</td> <td></td> </tr> </tbody> </table> | JS1EQB | Function | Default | 0 | JS1 does not affect EQ | Default | 1 | JS1 = 1 will cause the EQ to be bypassed | |
| JS1EQB | Function | Default | | | | | | | | |
| 0 | JS1 does not affect EQ | Default | | | | | | | | |
| 1 | JS1 = 1 will cause the EQ to be bypassed | | | | | | | | | |

| Register | Function | |
|---|---|------------------------------|
| JSMT [2,0] (JS Mute Enable selector) | These 3 bits select and enable the jack sense muting action. See Table 61. | |
| JS0DMX (JS0 Down-Mix Control Enable) | This bit enables JS0 to control the down-mix function. This function allows a digital mix of 6-channel audio into 2-channel audio. The mix can then be routed to the stereo LINE_OUT or HP_OUT jacks. When this bit is set to 1, JS0 = 1 will activate the down-mix conversion. See DMIX description in Register 0x76. The DMIX bits select the down-mix implementation type and can also force the function to be activated. | |
| | JS0DMX | Function |
| | 0 | JS0 does not affect down mix |
| 1 | JS0 = 1 activates the 6- to 2-channel down mix | |
| JS1DMX (JS1 Down-Mix Control Enable) | This bit enables JS1 to control the down-mix function (see the JS0DMx description above). When this bit is set to 1, JS1 = 1 will activate the down-mix conversion. | |
| | JS1DMX | Function |
| | 0 | JS1 does not affect down-mix |
| 1 | JS1 = 1 activates the 6- to 2-channel down-mix | |
| JSSPRD (JS Spread control enable) | This bit enables the 2-channel to 6-channel audio spread function when JSs are active (Logic State 1). Note that the SPRD bit can also force the Spread function without being gated by the jack senses. Please see this bit's description in Register 0x76 for a better understanding of the Spread function. | |
| | JSSPRD | Function |
| | 0 | JS1 does not affect spread |
| 1 | J10 = 1 activates spread | |
| x | Reserved. | Default: 0 |

FMUTE = Output is forced to mute independent of the respective volume register setting.

ACTIVE = Output is not muted and its status is dependent on the respective volume register setting.

OUT = Nothing is plugged into the jack and therefore the JS status is 0 (via the load resistor pull-down action).

IN = Jack has plug inserted and therefore the JS status is 1 (via the CODEC JS pin internal pull-up).

SERIAL CONFIGURATION (REGISTER 0x74)

When Register 0x00 is written (soft reset) the SLOT 16, REGM [2:0], SPOVR, SPAL, SPDZ, and SPLNK bits do not reset. All bits are reset on a hardware reset or power-on reset.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|----------------------|---------|-------|-------|-------|-------|------|------|-----|-------|-------|-------|------|------|------|------|--------|---------|
| 0x74 | Serial Configuration | SLOT 16 | REGM2 | REGM1 | REGM0 | REGM3 | OMS2 | OMS1 | OM0 | SPOVR | LBKS1 | LBKS0 | INTS | CSWP | SPAL | SPDZ | SP LNK | 0x1001 |

Table 62.

| Register | Function | Default |
|-------------------------------|--|--|
| SPLNK (S/PDIF LINK) | This bit enables the S/PDIF to link with the front DACs for data requesting. When linked the S/PDIF and front DACs should be set to the same data rate as they both generate data requests at the front DAC's request rate. | |
| | SPLNK | Function |
| | 0 | S/PDIF and front DACs are not linked |
| 1 | S/PDIF and front DACs are linked | Default |
| SPDZ (S/PDIF DACZ) | Sets data fill mode for S/PDIF transmitter FIFO under-runs. When this bit is set to ON (1) the S/PDIF and ADC rates should be set to the same rate. | |
| | SPDZ | On Under-Runs |
| | 0 | Repeat last sample out the S/PDIF stream |
| 1 | Forces midscale sample out the S/PDIF stream | Default |
| SPAL (S/PDIF ADC Loop Around) | SPAL | S/PDIF Transmitter Source |
| | 0 | Connected to the AC-LINK stream |
| | 1 | Connected to the digital ADC stream |
| (CSWP CENTER/LFE Swap) | Swaps the CENTER/LFE channels. Some systems have a swapped external connection for the CENTER and LFE channels. Setting this bit will swap these channels internal to the CODEC. Note that the CENTER and LFE controls do not change and remain at the same addresses and bit assignments. | |
| | CSWP | CENTER Pin LFE Pin |
| | 0 | CENTER channel LFE channel |
| 1 | LFE channel CENTER channel | Default |
| INTS (Interrupt Mode Select) | This bit selects the audio interrupt implementation path. Note that this bit does not generate an interrupt, rather it steers the path of the generated interrupt. | |
| | INTS | Interrupt Mode |
| | 0 | Bit 0 SLOT 12 (modem interrupt) |

| Register | Function | Default | |
|---|--|---|---------|
| | 1 | Slot 6 valid bit (MIC ADC interrupt) | |
| LBKS [1:0] Loop-Back Selection | These bits select the internal digital loop-back path when LPBK bit is active (see Register 0x20). | | |
| | LBKS [1:0] | Interrupt Mode | |
| | 00 | Loop back through the front DACs | Default |
| | 01 | Loop back through the SURROUND DACs | |
| | 10 | Loop back through the center and LFE DACs (center DAC loops back from the ADC left channel, the LFE DAC from the ADC right channel) | |
| | 11 | Reserved | |
| SPOVR (S/PDIF Enable Override) | Use this bit to enable S/PDIF operation even if the external S/PDIF detection resistor is not installed. | | |
| | SPOVR | S/PDIF Detection | |
| | 0 | External resistor determines the presence of S/PDIF | Default |
| | 1 | Enable S/PDIF operation | |
| OMS [2:0] Optional Microphone Selector | Selects the source of the microphone gain noost amplifiers. These bits work in conjunction with the 2CMIC (0x76 D06), MS (0x20 D08), and MMIX (0x7A D08) bits. | | |
| | OMS [2:0] | Left Channel | |
| | 000 | MIC pins | Default |
| | 001 | LINE_IN pins | |
| | 01x | C/LFE pins | |
| | 100 | Mix of MIC and C/LFE pins | |
| | 101 | Mix of MIC and LINE_IN pins | |
| | 110 | Mix of LINE_IN and C/LFE pins | |
| | 111 | Mix of MIC, LINE_IN and C/LFE pins | |
| REGM [3:0] | Bit mask indicating which CODEC is being accessed in a chained CODEC configuration. | | |
| | REGM0—Master CODEC register mask | Default | |
| | REGM1—Slave 1 CODEC register mask | | |
| | REGM2—Slave 2 CODEC register mask | | |
| | REGM3—Slave 3 CODEC register mask | | |
| SLOT 16 | Enable 16-bit slot mode: SLOT16 makes all AC link slots 16 bits in length, formatted into 16 slots. This is a preferred mode for DSP serial port interfacing. | | |
| | SLOT 16 | Function | |
| | 0 | Standard AC '97 operation | Default |
| | 1 | All ac link S slots are 16 bits | |
| x | Reserved | Default: 0 | |

| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| LISEL [1:0] (LINE_IN Selector) | Selects the source of the internal LINE_IN signals. | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>LISEL [1:0]</th> <th>LINE_IN Selection</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>LINE_IN pins</td> <td>Default</td> </tr> <tr> <td>01</td> <td>SURROUND pins—Places SURROUND outputs in Hi-Z state</td> <td></td> </tr> <tr> <td>1x</td> <td>MIC_1/2 pins</td> <td></td> </tr> </tbody> </table> | LISEL [1:0] | LINE_IN Selection | Default | 00 | LINE_IN pins | Default | 01 | SURROUND pins—Places SURROUND outputs in Hi-Z state | | 1x | MIC_1/2 pins | | | | |
| | LISEL [1:0] | LINE_IN Selection | Default | | | | | | | | | | | | | |
| | 00 | LINE_IN pins | Default | | | | | | | | | | | | | |
| 01 | SURROUND pins—Places SURROUND outputs in Hi-Z state | | | | | | | | | | | | | | | |
| 1x | MIC_1/2 pins | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| SRU (Sample Rate Unlock) | Controls all DAC sample rate locking. | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>SRU</th> <th>Surround State</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>All DAC sample rates are locked to the front sample rate</td> <td></td> </tr> <tr> <td>1</td> <td>Front, surround and LFE sample rates can be set independently</td> <td>Default</td> </tr> </tbody> </table> | SRU | Surround State | Default | 0 | All DAC sample rates are locked to the front sample rate | | 1 | Front, surround and LFE sample rates can be set independently | Default | | | | | | |
| | SRU | Surround State | Default | | | | | | | | | | | | | |
| 0 | All DAC sample rates are locked to the front sample rate | | | | | | | | | | | | | | | |
| 1 | Front, surround and LFE sample rates can be set independently | Default | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| SOSEL (Surround Amplifier Input Selection) | Selects either the surround DAC or analog mixer as the source driving the SURROUND output pin amplifier. | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>SOSEL</th> <th>Surround Source</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Surround DACs</td> <td>Default</td> </tr> <tr> <td>1</td> <td>Analog Mixer</td> <td></td> </tr> </tbody> </table> | SOSEL | Surround Source | Default | 0 | Surround DACs | Default | 1 | Analog Mixer | | | | | | | |
| | SOSEL | Surround Source | Default | | | | | | | | | | | | | |
| 0 | Surround DACs | Default | | | | | | | | | | | | | | |
| 1 | Analog Mixer | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| 2CMIC (2-Channel MIC Select) | Used in conjunction with the OMS [2:0] (0x74 D10:08]), MS (0x20 D08), and MMIX (0x7A D02) bits to set the microphone selection. This bit enables simultaneous recording from MIC_1 and MIC_2 inputs, using a stereo microphone array. If the MMIX (0x7A D02) bit is set this bit is ignored. | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>2CMIC</th> <th>2 Channel MIC State</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Both outputs are driven by the left channel of the selector</td> <td>Default</td> </tr> <tr> <td>1</td> <td>Stereo operation, the left and right channels are driven separately</td> <td></td> </tr> </tbody> </table> | 2CMIC | 2 Channel MIC State | Default | 0 | Both outputs are driven by the left channel of the selector | Default | 1 | Stereo operation, the left and right channels are driven separately | | | | | | | |
| | 2CMIC | 2 Channel MIC State | Default | | | | | | | | | | | | | |
| | 0 | Both outputs are driven by the left channel of the selector | Default | | | | | | | | | | | | | |
| 1 | Stereo operation, the left and right channels are driven separately | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| SPRD (Spread Enable) | This bit enables spreading of 2-channel media to all 6-output channels. This function is implemented in the analog section by using the output selector controls lines for the center/LFE, surround and LINE_OUT output channels. The jack sense pins can also be setup to control (gate) this function depending on the JSSPRD bit (see Register 0x72). The SPRD bit operates independently and does not affect the LOSEL and HPSEL operation. | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>SPRD</th> <th>Spread State</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>No spreading occurs unless activated by jack sense</td> <td>Default</td> </tr> <tr> <td>1</td> <td>The SPDR selector drives the center and LFE outputs from the MONO_OUT</td> <td></td> </tr> </tbody> </table> | SPRD | Spread State | Default | 0 | No spreading occurs unless activated by jack sense | Default | 1 | The SPDR selector drives the center and LFE outputs from the MONO_OUT | | | | | | | |
| | SPRD | Spread State | Default | | | | | | | | | | | | | |
| | 0 | No spreading occurs unless activated by jack sense | Default | | | | | | | | | | | | | |
| 1 | The SPDR selector drives the center and LFE outputs from the MONO_OUT | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| CLDIS (C/LFE Output Enable) | Controls the Hi-Z state of the SURROUND_L/R output pins. Pins are placed into a Hi-Z mode by software control or when they are selected as inputs to the MIC_1/2 selector (see the OMS [2:0] bits 740x D [10:08]). | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>CLDIS</th> <th>C/LFE Output State</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Outputs enabled</td> <td>Default</td> </tr> <tr> <td>1</td> <td>Outputs tristated</td> <td></td> </tr> </tbody> </table> | CLDIS | C/LFE Output State | Default | 0 | Outputs enabled | Default | 1 | Outputs tristated | | | | | | | |
| | CLDIS | C/LFE Output State | Default | | | | | | | | | | | | | |
| 0 | Outputs enabled | Default | | | | | | | | | | | | | | |
| 1 | Outputs tristated | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |

| Register | Function | |
|---|--|---|
| DMIX [1:0] (DOWN MIX Mode Select) | Provides analog down-mixing of the center, LFE and/or surround channels into the mixer channels. This allows the full content of 5.1 or quad media to be played through stereo headphones or speakers. The jack sense pins can also be setup to control (gate) this function depending on the JS0DMx and JS1DMx bits (0x72 D [14:13]). | |
| | DMIX [1:0] | Down-Mix State |
| | 0x | No down-mix unless activated by jack sense Default |
| | 10 | Selects 6-to-4 down-mix. The center and LFE channels are summed equally into the Mixer L/R channels |
| | 11 | Selects 6-to-2 down-mix. In addition to the center and LFE channels, the SURROUND channels are summed into the mixer L/R channels |
| SODIS (Surround Output Enable) | Controls the Hi-Z state of the SURROUND output pins. Pins are placed into a Hi-Z mode by software control or when they are selected as inputs to the LINE_IN selector (see the LISEL [1:0] bits 0x76 D [03:02]). | |
| | CLDIS | SURROUND_OUT State |
| | 0 | Outputs enabled Default |
| | 1 | Outputs tri-stated (Hi-Z) |
| MSPLT (RO) (Mute Split) | Separates the left and right mutes on all volume registers. This bit is read-only 1 (one) on the AD1986 indicating that mute split is always enabled. | |
| AC '97NC (RO) (AC '97 No Compatibility Mode) | Changes addressing to ADI model (vs. true AC '97 definition). This bit is read-only 1 (one) on the AD1986 indicating that ADI addressing is always enabled. | |
| DACZ (DAC Zero-Fill) | Determines DAC data fill under starved condition. | |
| | DACZ | DAC Fill State |
| | 0 | DAC data is repeated when DACs are starved for data Default |
| | 1 | DAC data is zero-filled when DACs are starved for data |
| x | Reserved. Default: 0 | |

ADVANCED JACK SENSE (REGISTER 0x78)

All register bits are read/write except for JSxST bits, which are read-only. **Important:** Please refer to Table 72 to understand how JACK_SENSE_A and JACK_SENSE_B codec pins translate to JS7...JS2.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|---------------------|--------|---------|--------|---------|--------|---------|--------|---------|--------|----|--------|--------|--------|--------|---------|---------|---------|
| 0x78 | Advanced Jack Sense | JS7 ST | JS7 INT | JS6 ST | JS6 INT | JS5 ST | JS5 INT | JS4 ST | JS4 INT | JS4-7H | x | JS3 MD | JS2 MD | JS3 ST | JS2 ST | JS3 INT | JS2 INT | 0xxxxx |

Table 64.

| Register | Function | |
|------------------|--|---|
| JS [7:2] INT | Indicates JSx has generated an interrupt. Remains set until the software services JSx interrupt; i.e., JSx ISR should clear this bit by writing a 0 to it. 1. Interrupts are generated by valid state changes of JSx. 2. Interrupt to the system is actually an OR combination of this bit and JS7 JS0 INT. 3. Interrupt implementation path is selected by the INTS bit (Register 0x74). 4. It is also possible to generate a software system interrupt by writing a 1 to this bit. | |
| | JS [7:4] INT | Read |
| | 0 | JSx logic is not interrupting |
| | 1 | Sx logic interrupted |
| JS [7:4] ST (RO) | This bit always reports the logic state of JS7 thru 4 detection logic. | |
| | JS [7:4] ST | Jack State |
| | 0 | No jack present |
| | 1 | Jack detected |
| JS [3:2] MD | This bit selects the operation mode for JS2 and JS3. | |
| | JS [3:2] MD | Interrupt Mode |
| | 0 | Jack Sense Mode—jack sense state requires software polling Default |
| | 1 | Interrupt Mode—jack sense events will generate interrupts |

| Register | Function | |
|------------------------------------|--|--|
| JS4–7H Interrupt Mode Select | This bit selects the audio interrupt implementation path (for JS4 to 7). This bit does <u>not</u> generate an interrupt, rather it steers the path of the generated interrupt. | |
| | JS4 to 7H | Interrupt Mode—JS4 to 7 |
| | 0 | Bit 0 SLOT 12 (modem interrupt) Default |
| 1 | Slot 6 valid bit (MIC ADC interrupt) | |
| x | Reserved | Default: 0 |

MISC CONTROL BITS 3 (REGISTER 0x7A)

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|------|---------------------|--------|--------|--------|-------|--------|---------|--------|---------|----|----|----|--------|-----|------|----|----|---------|
| 0x7A | Misc Control Bits 3 | JSINVB | HPSEL1 | HPSEL0 | LOSEL | JSINVA | LVREF 2 | LVREF1 | LVREF 0 | x | x | x | LOHPEN | GPO | MMIX | x | x | 0x0000 |

Table 65.

| Register | Function | |
|---|--|---|
| MMIX | Used in conjunction with the OMS [2:0] (0x74 D10:08), MS (0x20 D08), and 2CMIC (0x76 D06) bits to mix the microphone selector left/right channels. If the MMIX bit is set, the 2CMIC and MS bits are ignored. | |
| | MMIX | Function Default |
| | 0 | Microphone channels are not mixed Default |
| 1 | The left/right channels from the microphone selector are mixed Sets the state of the GPO pin | |
| GPO | GPO | Function Default |
| | 0 | GPO pin is at logic low (DV _{SS}) Default |
| | 1 | GPO pin is at logic high (DV _{DD}) |
| LOHPEN | Enables the headphone drive on the LINE_OUT pins. Disabling the headphone drive is the same as powering it down (see the PR6 bit (0x26 D14)). | |
| | LOHPEN | Function Default |
| | 0 | LINE_OUT headphone drive is disabled Default |
| 1 | LINE_OUT headphone drive is enabled | |
| LVREF [2:0] (Line In VREF_OUT) | Sets the voltage/state of the LINE_IN VREF_OUT signal. VREF_OUT is used to power microphone style devices plugged into the connected jack circuitry. The VREF_OUT pin must be connected to both the left and right channels through external resistors to function properly. Selections other than those defined are invalid and should not be programmed. | |
| | LINE_IN VREF_OUT Setting | |
| | LVREF [2:0] | 5.0 AV_{DD} 3.3 V AV_{DD} |
| | 000 | Hi-Z Hi-Z Default |
| | 001 | 2.25 V 2.25 V |
| | 010 | 0V 0 V |
| 100 | 3.70 V 2.25 V | |
| LOSEL (LINE_OUT Amplifiers Input Select) | This bit allows the LINE_OUT output amplifiers to be driven by the mixer or the surround DACs. The main purpose for this is to allow swapping of the front and surround channels to make better use of the SURR/HP_OUT output amplifiers. This bit should normally be used in tandem with the HPSEL bit (see below). | |
| | LOSEL | LINE_OUT Select Default |
| | 0 | LINE_OUT amplifiers are driven by the analog mixer outputs Default |
| 1 | LINE_OUT amplifiers are driven by the surround DAC | |
| JSINVA Jack Sense Invert | SENSE_A: Select the style of switches used on the audio jacks connected to Sense A. | |
| | JSINVA | Jack Sense Invert—SENSE_A |
| | 0 | SENSE_A configured for normally-open (NO) switches Default |
| 1 | SENSE_A configured for normally-closed (NC) switches | |

| Register | Function | |
|---|--|--|
| HPSEL [1:0] (Headphone Amplifier Input Select) | This bit allows the headphone power amps to be driven from the surround DACs, C/LFE DACs, or from the mixer outputs. | |
| | HPSEL [1:0] | HP_OUT Selection |
| | 00 | Outputs are driven by the mixer outputs Default |
| | 01 | Outputs are driven by the surround DACs |
| | 1x | Outputs are driven by the C/LFE DACs |
| JSINVB (Jack Sense Invert) | SENSE_B: Select the style of switches used on the audio jacks connected to Sense B. | |
| | JSINVB | Jack Sense Invert—SENSE_B |
| | 0 | JACK_SENSE_B configured for normally-open (NO) switches Default |
| | 1 | JACK_SENSE_B configured for normally-closed (NC) switches |
| x | Reserved. Default: 0 | |

VENDOR ID REGISTERS (REGISTER 0x7C to 0x7E)

| 0x601 | CODEC Class/Rev | x | x | x | CL4 | CL3 | CL2 | CL1 | CL0 | RV7 | RV6 | RV5 | RV4 | RV3 | RV2 | RV1 | RV0 | 0x0002 |

Table 67.

| Register | Function | Default |
|--|---|---|
| RV [7:0] (Revision ID: (RO)) | These bits specify a device specific revision identifier. The vendor chooses this value. Zero is an acceptable value. This field should be viewed as a vendor defined extension to the CODEC ID. This number changes with new CODEC stepping of the same CODEC ID. This number will increment with each stepping/rev. of the CODEC chip. | |
| CL [4:0] (CODEC Compatibility Class (RO)) | The AD1986 will return 0x00 from this register. This is a CODEC vendor specific field to define software compatibility for the CODEC. Software reads this field together with CODEC vendor ID (Register 7C–0x7E) to determine vendor specific programming interface compatibility. Software can rely on vendor specific register behavior to be compatible among vendor CODECs of the same class. | |
| | 0x00 0x01-0x1F | Field not implemented Vendor specific compatibility class code |
| x | Reserved. | Default: 0 |

PCI SUBSYSTEM VENDOR ID REGISTER (REGISTER 0x62, PAGE 01)

This register is only reset by power-on. It is used by the BIOS to store configuration information (per AC '97 Revision 2.3 specification) and must not be reset by soft or hardware resets.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|-------|----------|-------|-------|-------|-------|-------|-------|------|------|------|------|------|------|------|------|------|------|---------|
| 0x621 | PCI SVID | PVI15 | PVI14 | PVI13 | PVI12 | PVI11 | PVI10 | PVI9 | PVI8 | PVI7 | PVI6 | PVI5 | PVI4 | PVI3 | PVI2 | PVI1 | PVI0 | 0xFFFF |

Table 68.

| Register | Function |
|--|--|
| PVI [15:0] PCI Sub System Vendor ID | Optional per AC '97 specifications, should be implemented as read/write on AD1986. This field provides the PCI subsystem vendor ID of the audio or modem subassembly vendor (i.e., CNR manufacturer, motherboard vendor). This is NOT the CODEC vendor PCI vendor ID or the AC '97 controller PCI vendor ID. If data is not available it should return 0xFFFF. |

PCI SUBSYSTEM DEVICE ID REGISTER (REGISTER 0x64, PAGE 01)

This register is only reset by power-on. It is used by the BIOS to store configuration information (per AC '97 v2.3 specification) and must not be reset by soft or hardware resets.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

| 0x641 | PCI SID | PI15 | PI14 | PI13 | PI12 | PI11 | PI10 | PI9 | PI8 | PI7 | PI6 | PI5 | PI4 | PI3 | PI2 | PI1 | PI0 | 0xFFFF |

Table 69.

| Register | Function |
|------------------------------|---|
| PI [15:0] (PCI Vendor ID) | Optional per AC '97 specifications, should be implemented as read/write on the AD1986. This field provides the PCI subsystem ID of the audio or modem subassembly (i.e., CNR model, motherboard SKU). This is NOT the CODEC vendor PCI ID or the AC '97 controller PCI ID. Information in this field must be available, because the AC '97 controller reads when the CODEC ready is asserted in the AC link. If data is not available it should return FFFFh. |

FUNCTION SELECT REGISTER (REGISTER 0x66, PAGE 01)

This register is used to select which function (analog I/O pins), information and I/O (0x6801), and sense (0x6A01) registers apply to it.

The AD1986 associates FC = 0x0 with surround functions and FC = 0x01 with front functions. These are changed in the AD1986 to align with the new device pin-out and to separate LINE_OUT functions.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

Table 70.

| Register | Function |
|------------------------------------|--|
| T/R (FIP or Ring Selection Bit) | This bit sets which jack conductor the sense value is measured from. Software will program the corresponding rng/tp selector bit together with the I/O number in bits FC [3:0]. Once software programs the value and properly reads it back to confirm selection and implementation, it will access the rest of the bits fields in the descriptor. Mono inputs and outputs should report the relevant function and sense information when T/R is set to 0 (tip). The FIP bit should report 0 (Page 0x01, Register 0x68, Bit 0 reports no function information present) when T/R is set to a 1 on a mono input or output. |
| T/R | Function |
| 0 | Tip (left channel) Default |
| 1 | Ring (right channel) |
| FC [3:0] Function Code Bits | These bits specify the type of audio function described by this page. These bits are read/write and represent current AC '97 Revision 2.2 defined I/O capabilities. Software will program the corresponding I/O number in this field together with the tip/ring selector bit T/R. Once software programs the value and properly reads it back to confirm selection and implementation, it will access the rest of the bits fields in the descriptor. |
| FC [3:0] | Function |
| 0x0 | DAC 1 (master out). maps to front DACs (L/R) Default |
| 0x1 | DAC 2 (AUX out). maps to surround DACs (L/R) |
| 0x2 | DAC 3 (C/LFE). maps to C/LFE DACs |
| 0x3 | S/P-DIF out |
| 0x4 | Phone in |
| 0x5 | MIC_1 (Mic select = 0) |
| 0x6 | MIC_2 (Mic select = 1) |
| 0x7 | Line in |
| 0x8 | CD in |
| 0x9 | Video in Not supported on the AD1986 |
| 0xA | Aux in |
| 0xB | Mono out |
| 0xC | Headphone ut |
| 0xD–0xF | Reserved |
| x | Reserved. Default: 0 |

INFORMATION AND I/O REGISTER (REGISTER 0x68, PAGE 01)

This address represents multiple registers (one for each supported function code (FC [3:0] bits (0x66 D [04:01])). These values are only reset by power-on. It is used by the BIOS to store configuration information (per AC '97 Revision 2.3 specifications) and must not be reset by soft or hardware resets.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |
|-------|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|----|----|----|----|-----|---------|
| 0x681 | Information and I/O | G4 | G3 | G2 | G1 | G0 | INV | DL4 | DL3 | DL2 | DL1 | DL0 | IV | x | x | x | FIP | 0xxxxx |

Table 71.

| Register | Function |
|--|--|
| FIP (RO) (Function Information Present) | CODEC default. When set to a 1, this bit indicates that the G [4:0], INV, DL [4:0] (in Register 0x681), and ST [2:0] (in Register 0x6A1) bits are supported and are read/write capable. This bit set to a 0 indicates that the G [4:0], INV, DL [4:0], and ST [2:0] bits are not supported, and are read-only with a value of 0. Mono inputs and outputs should report the relevant function and sense information when T/R is set to 0 (tip). The FIP bit should report 0 (Page 0x01, Register 0x68, Bit 0 reports no function information present) when T/R is set to a 1 on a mono input or output. |
| FIP | Function |
| 0 | Function information not supported Power-on default |
| 1 | Function information supported |

| Register | Function | | |
|---|--|---|---|
| IV (Information Valid Bit) | Indicates whether a sensing method is provided by the CODEC and if information field is valid. This field is updated by the CODEC. | | |
| | IV | Function | |
| | 0 | After CODEC reset de-assertion, it indicates the CODEC does NOT provide sensing logic and this bit will be <u>Read-Only</u> . After a sense cycle is completed indicates that no information is provided on the sensing method. | |
| | 1 | After CODEC reset de-assertion, it indicates the CODEC provides sensing logic for this I/O and this bit is <u>Read/Write</u> . After clearing this bit by writing 1, when a sense cycle is completed indicates that there is valid information in the remaining descriptor bits. Writing 0 to this bit has no effect. | |
| DL [4:0] (Buffer Delays, Read/Write) | A number representing a delay measurement for the input and output channels. The default value is the delay internal to the CODEC. The BIOS may add to this value the known delays external to the CODEC, such as for an external amplifier, logic, etc. Software will use this value to accurately calculate audio stream position with respect to what is been reproduced or recorded. These values are in 20.83 microsecond (1/48000 second) units. For output channels, this timing is from the end of AC link frame in which the sample is provided, until the time the analog signal appears at the output pin. For input streams, this is from when the analog signal is presented at the pin until the representative sample is provided on the AC link. Analog to analog paths are not considered in this measurement. The measurement is a typical measurement, at a 48 KHz sample rate, with minimal in-CODEC processing (i.e., 3D effects are turned off.) An example of an audio output delay is filter group delay and FIFO or other sample buffers in the path. So when an audio PCM sample is written to the CODEC in an AC '97 frame it will be delayed before the output pin is updated to that value. | | |
| | DL [4:0] | Function | |
| | 0x00 | Information not provided | |
| | 0x01-0x1E | Buffer delay: 20.83 μ s per unit | |
| | 0x1F | Reserved | |
| INV (Inversion Bit, Read/Write, CODEC Default) | Indicates that the CODEC presents a 180 degree phase shift to the signal. This bit is only reset by a power-on reset, since it is typically written by the system BIOS and is not reset by CODEC hard or soft resets as long as power remains applied to the CODEC. | | |
| | INV | Function | |
| | 0 | No phase shift | |
| | 1 | Signal is shifted by 180° from the source signal | |
| G [4:0] (Gain Bits (Read/Write)) | The CODEC updates these bits with the gain value (dB relative to level-out) in 1.5 dBV increments, not including the volume control gains. For example, if the volume gain is to 0 dB, then the output pin should be at the 0 dB level. Any difference in the gain is reflected here. When relevant, the BIOS updates this bit to take into consideration external amplifiers or other external logic that it knows about. G [3:0] indicates the magnitude of the gain. G [4] indicates whether the value is a gain or attenuation—essentially it is a sign bit. These bits are only reset by a power-on reset as they are typically written by the system BIOS and are not reset by CODEC hard or soft resets as long as power remains applied to the CODEC. | | |
| | G4 | G [3:0] | Gain/Attenuation (dB Relative to Level-Out) |
| | 0 | 0000 | 0 dB |
| | 0 | 0001 | +1.5 dB |
| | | ... 1111 | +1.5 dB \times G [3:0] +24.0 dB |
| | 1 | 0001 | -1.5 dB |
| ... 1111 | | -1.5 dB \times G [3:0] -24.0 dB | |
| x | Reserved | | |
| | | Default: 0 | |

SENSE REGISTER (REGISTER 0x6A, PAGE 01)

This address represents multiple registers (one for each supported function code (FC [3:0] bits (0x66 D [04:01])). The ST [2:0] bits are only reset by power-on. They are used by the BIOS to store configuration information (per AC '97 Revision 2.3 specifications) and must not be reset by soft, hard or hardware resets. The remaining bits are the result of the last sense operation performed by the impedance sensing circuitry.

| Reg | Name | D15 | D14 | D13 | D12 | D11 | D10 | D9 | D8 | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 | Default |

JACK PRESENCE DETECTION

The AD1986 uses two jack sense lines for presence detection on up to eight external jacks. These lines, combined with the device detection circuitry, enable software to determine whether there is a device plugged into the circuit and what type of device it is. With this feature, software can reconfigure jacks and amplifiers as necessary to insure proper audio operation.

Jack presence is detected using a resistor tree arrangement. Up to four jacks can be sensed on a single sense line by using a different value resistance for each jack between the sense line and ground (AV_{SS}). Each sense line must have a single 2.49k 1% resistor connected between the sense line and AV_{DD} . The specific resistor values for each jack are shown in Table 73. One percent tolerance resistors should be used for all jack presence circuitry to insure accurate detection.

AUDIO JACK STYLES (NC/NO)

The jack sense lines on the AD1986 can be programmed for use with normally-open (NO) or normally closed (NC) switch types. Current standard stereo audio jacks have wrap-back pins that are normally closed. New audio jacks use isolated, normally open switches, which are required for resistive ladder jack presence detection. Each sense group (A or B) must have the same style of jack for presence detection to function correctly. However, the group (A or B) sense type can be programmed separately to accommodate systems with different styles of jacks on the front versus rear panel.

The AD1986 defaults to the isolated, normally open switch types on power up. The jack sense style for $SENSE_A$ is controlled by the JSINVA bit (Register: 0x7A D11). The jack

sense style for $SENSE_B$ is controlled by the JSINVB bit (Register 0x7A D15). Writing a 1 to these bits will configure the corresponding sense circuit for normally closed instead of normally open switch types.

Wrap-back jacks cannot be used in microphone-capable circuits. For this reason isolated switches are recommended. The codec defaults to sensing NO style switches and this method is preferred.

Normally-Open Switches

If a connection is not present, do not install the sense resistor pertaining to that connection.

If a connection is present, but there is no related switch (such as an internal connection), install the sense resistor pertaining to that connection.

Normally Closed Switches

Connections capable of MIC bias require isolated switches to function correctly. When using normally closed, wrap-back switches, the jack resistor must be split into two values. One value connects the sense line to the jack switch and the other connects the related audio connection to AV_{SS} . The total resistance (sense line to AV_{SS}) must equal the value specified in Table 73.

If a connection is not present, install the sense resistors pertaining to that connection.

If a connection is present, but there is no related switch (such as an internal connection), do not install the sense resistors pertaining to that connection.

Table 73. Jack Sense Mapping

| Resistor (1% tolerance) | JACK_SENSE_A | | | JACK_SENSE_B | | |
|-------------------------|--------------|------|-----|--------------|------|-----|
| | Mnemonic | Jack | JS | Mnemonic | Jack | JS |
| 4.99k | | D | JS7 | LINE OUT | H | JS0 |
| 10.0k | LINE IN | C | JS4 | C/LFE | G | JS3 |
| 20.0k | MIC_1/2 | B | JS5 | SURROUND | F | JS2 |
| 40.2k | HP_OUT | A | JS1 | AUX IN | E | JS6 |
